## EXPERIENCE

---

**Backend developer with 1.5 years of experience in PHP. I have worked with CodeIgniter and have hands-on experience in Laravel.**

## PROJECTS

---

➤ **Book-Store**

This project is a full-stack web application for a bookstore, built using modern web development technologies.

- **Frontend:** The user interface is developed with React, providing a dynamic and responsive experience for users to browse books.
- **Backend:** The server-side functionality is handled by Node.js and Express, ensuring efficient handling of requests and data processing.
- **Database:** MongoDB is used as the database to store book information, user data, and order details, offering flexibility and scalability.
- **Version Control:** Git is utilized for version control.

➤ **WheelyWine**

- **Automobile Service Booking Web Application build in laravel.**
- A full-stack web platform with admin and user panels for managing car services and booking service appointments online.

## DECLARATION

---

I do here by declare that the above information is true to the best of my knowledge.
